

Mathematics for Business and Personal Finance © 2016

GRADES 9–12

Understanding the basics of business and personal finance are essential as students become greater consumers and start their careers. Using everyday economic situations, *Mathematics for Business & Personal Finance* helps students improve their financial literacy and basic math skills. To prepare students for the forthcoming math problems throughout the book, the first section includes 43 Basic Math Skills Workshops that range from working with decimals to fractions and estimating to learning business data analysis and problem solving strategies. Throughout the rest of the book, topics include budgeting and money management, banking and credit, saving and investing, as well as business finance.

Mathematics for Business & Personal Finance can be used to teach business mathematics, consumer mathematics, and mathematics of personal finance courses. It can be used either as a stand-alone course or as a supplement with related business or math courses.

DIGITAL PLATFORM FEATURES
